Marko Ilic, Software Development Manager, Trapeze Group MoD

marko.ilic@trapezegroup.com

To whom it may concern:

I am writing to recommend Ramya Anand for the position of intermediate software developer. I have worked with Ramya since July 2021, and can attest to her commitment to team goals, as well as her drive to continually learn new skills and tackle new challenges in this role. Whilst primarily working as a backend developer with the .NET framework during her tenure, priorities to increase frontend development throughput incurred a quick ramp up with newer versions of Angular which Ramya was able to pick up with relative ease, showcasing her versatility in the development field. She has not been shy to voice areas of improvement in the product and make use of prior experiences with tools and technologies, namely in Azure, to help solve various business problems.

She exhibits clear verbal and written communication skills, demonstrated through her speaking towards architectural diagrams and explaining technical concepts to others on her team. She continues to find opportunities for self-improvement and professional growth. She ensures that her coding submissions are met with a high level of automated test coverage to ensure the validity of her solutions for present and future use cases, and she strives to maintain clean coding practices.

I believe that Ramya is a talented and dedicated software developer and would be a valuable asset to any organization. She possesses both the hard and soft skills required for the role and will positively contribute to any dev team.

Please feel free to contact me if you require any further information regarding Ramya Anand and her qualifications. I am happy to provide any additional insights or answer any questions that you may have.

Sincerely,

Marko Ilic
